Hospital Operations & Patient Analytics Dashboard

FINAL DASHBOARD STORYBOARD

Milestone 3 — Dashboard Development Completed

Field	Final Project Status
Build Platform	Microsoft Power BI Desktop / Power BI
Report Pages	4 core dashboards: Hospital Overview, Patient Flow, Department Analytics, Resource Utilization
Project Stage	Milestone 3 — Dashboard Development
Storyboard Status	Final / As-Built
Purpose	Document the dashboards as implemented in the completed project

1. Final Storyboard Purpose

This document is the updated, final version of the original Milestone 2 dashboard storyboard. The original storyboard described the intended report-page layouts before Milestone 3 development. This version documents the implemented dashboard suite after completion.

Important: The dashboard screenshots to be inserted in the final evidence section should be the real screenshots from the completed Power BI project, replacing the original illustrative wireframes and placeholder values.

- Documents the final four-dashboard structure.
- Records the implemented dashboard content and interaction design.
- Provides a clear link between the original planning stage and the completed dashboard.
- Acts as a portfolio/submission-ready visual record of Milestone 3.

Final Dashboard Suite

Dashboard	Primary Purpose	Implementation Status
Hospital Overview	Executive hospital performance and KPI monitoring	✓ AS-BUILT
Patient Flow	Admissions, discharges, patient movement, stay and load analysis	✓ AS-BUILT
Department Analytics	Department performance, volume, readmission, efficiency and capacity	✓ AS-BUILT
Resource Utilization	Bed, staff and equipment utilization and capacity planning	✓ AS-BUILT

2. Final Design System & Global Interaction

The final report uses a consistent visual structure across the four dashboards. Navigation and filtering are implemented in the completed Power BI report.

Element	Final Implementation
Dashboard navigation	Navigation between the four core report pages
Global filtering	Interactive slicers/filters used to analyze the report data
Dashboard interaction	Visual selections/cross-filtering and report interactions
Page structure	Consistent KPI, chart and analytical sections across dashboards
Visual styling	Final project styling applied during dashboard development

Navigation Testing Note

In Power BI Desktop editing mode, navigation buttons can be tested using **Ctrl + Click**. The completed report navigation has been tested this way and successfully moves between the intended report pages.

3. Report Page 1 — Hospital Overview

✓ AS-BUILT — implemented in the final Power BI project

Purpose: Executive-level snapshot of overall hospital performance.

Implemented analytical areas

- Hospital performance KPIs
- Admissions overview and operational trends
- Occupancy monitoring
- Readmission analysis
- Monthly operational trends

4. Report Page 2 — Patient Flow

✓ AS-BUILT — implemented in the final Power BI project

Purpose: Focused analysis of how patients move through the hospital, including admissions, discharges, stay and patient-load patterns.

Implemented analytical areas

- Admission trends
- Discharge tracking
- Patient movement analysis
- Average length-of-stay analysis
- Peak patient load monitoring

5. Report Page 3 — Department Analytics

✓ AS-BUILT — implemented in the final Power BI project

Purpose: Comparison of performance and efficiency across hospital departments.

Implemented analytical areas

- Department performance analysis
- Patient volume by department
- Readmission by department
- Department efficiency comparison
- Treatment capacity analysis

6. Report Page 4 — Resource Utilization

✓ AS-BUILT — implemented in the final Power BI project

Purpose: Tracks hospital resources to support capacity planning and operational decisions.

Implemented analytical areas

- Bed utilization analysis
- Staff allocation monitoring
- Equipment utilization tracking
- Capacity planning insights
- Resource availability analysis

7. KPI Definitions & Analytical Coverage

The final storyboard records the KPI and analytical areas required by the project. Exact numerical values should be taken from the final Power BI report rather than from the original planning placeholders.

KPI / Analytical Area	Purpose / Definition
Total Admissions	Number of patient admission records in the selected reporting context.
Occupancy Rate	Monitors the proportion of available hospital capacity occupied.
Average Length of Stay	Measures the average duration of patient stay.
Readmission Rate	Measures the proportion/rate of patients who are readmitted according to the project's KPI logic.
Bed Utilization Rate	Measures utilization of available bed capacity.
Department Efficiency Score	Composite department performance/efficiency indicator from the KPI engineering stage.

Additional implemented analysis

- Department-level comparisons support resource and operational decisions.
- Staff and equipment analysis extends resource utilization beyond beds.
- Interactive filters allow users to explore the report dynamically.

8. Final Validation & Milestone 3 Completion

The original storyboard was a Milestone 2 planning artifact. This updated version represents the dashboard suite after Milestone 3 development. The final evidence should use screenshots taken directly from the completed Power BI report.

Validation Item	Final Status
Four core dashboards completed	✓ Completed
Hospital Overview implemented	✓ Completed
Patient Flow implemented	✓ Completed
Department Analytics implemented	✓ Completed
Resource Utilization implemented	✓ Completed
KPIs implemented and presented	✓ Completed
Interactive filters	✓ Working
Dashboard navigation	✓ Working / tested in Power BI Desktop
Dashboard interactions	✓ Implemented
Final dashboard screenshots	→ Insert actual project screenshots

Milestone 3 Completion Statement

Milestone 3 — Dashboard Development: COMPLETED. The planned dashboard structure has been implemented as a four-page Power BI dashboard suite covering hospital overview, patient flow, department analytics, and resource utilization. The final report includes interactive analysis, filters and navigation, with the real dashboard screenshots serving as evidence of the completed implementation.
