

MedTrack DV — Executive Operations Briefing

Automated Pipeline Intelligence & Capacity Status Report | Period: 2020 – 2025

Total Admissions	Average Stay (ALOS)	Occupancy Rate	Bed Utilization	Readmission Rate
45,000	5.16 Days	63.81%	63.86%	77.72%

Key Operational Findings & Clinical Storylines

Volume Leadership: Surgery is the primary volume driver, accounting for **10,126 admissions (22.5%)** and maintaining the top composite Efficiency Score of **64.00** due to high patient-to-staff throughput.

Capacity Alert: ICU bed occupancy has reached **80.00%** (critical surge threshold) with an extended average length of stay of **9.98 days**, indicating high acuity and intensive resource demands.

Readmission Risk: Overall 30-day readmissions remain elevated across departments (77.72%), highlighting the need for optimized post-discharge follow-up protocols.

Department Performance & Operational Status Breakdown

Department	Admissions	Avg LOS	Beds (Tot/Occ)	Staff Workload	Efficiency	Capacity Status
Emergency	8,777	4.69 d	75 / 47	975.2 pts/stf	46.64	Staffing Caution (Elevated)
ICU	4,040	9.98 d	65 / 52	336.7 pts/stf	40.00	Surge Protocol (Critical)
Internal Medicine	7,695	4.66 d	65 / 40	855.0 pts/stf	41.75	Normal Capacity
Orthopedics	5,924	4.68 d	50 / 31	538.5 pts/stf	35.59	Staffing Caution (Elevated)
Pediatrics	8,438	4.69 d	70 / 43	843.8 pts/stf	41.06	Normal Capacity
Surgery	10,126	4.67 d	90 / 57	1687.7 pts/stf	64.00	Staffing Caution (Elevated)

Prescriptive Management Actions

Immediate Reallocation Protocol: Initiate clinical staff surge support for ICU to manage 80.0% occupancy. Implement post-discharge check-in workflows in Surgery and Emergency to reduce 30-day readmission pressure.
